Okay, thanks -- as indicated, they may use the 2 grams of sediment.

Rob,

The data will not be used for the project, this is strictly an evaluation of hydrocarbon removal to improve the method.

Thanks,

Jennifer

It should be fine, but we have one question....

Will the data be used as part of the project, or is this just strictly an evaluation of hydrocarbon removal to improve the method? If it is the former, we would like to request some additional information. If it is the latter, then they may proceed.

Thanks

Can we allow AP to use 2 g of sediments for this work?

Bill/Rob,

I wanted to follow-up with you on the request to use the benthic sediments for experiments as described below. Is this acceptable?

If you require additional information, please let me know.

Thanks,

Bill/Rob,

Analytical Perspectives contacted me because they are looking to evaluate a hydrocarbon removal method to improve their ability to analyze PCBs in sediments. They were wondering if it would be acceptable to perform analyses on some of the benthic sediment samples from 2009-2010. They were interested in using approximately 2g from about 5 samples and would not exhaust the sample volume. Please let me know if this is acceptable.

Thanks,

Jennifer
